MAKE BETTER USE OF THE HEAT YOU ALREADY HAVE

Move excess warmth from one room to the rest of your home

FEATURES	BENEFITS
Centrifugal fan	Innovative fan design creates higher static air pressure to push warm air efficiently.
EC fan	Designed to match airflow to system demand, helping reduce unnecessary energy use while supporting low noise operation.
Digital controller	Easy to use controls allow temperatures to be set and managed, with the current room temperature displayed at all times.
Built-in Thermostat	The built-in thermostat controls airflow automatically when the room temperature rises above the set temperature, with the option to adjust fan speed if required.
Insulated Ducting	Minimise heat loss when transferring excess warm air saving energy costs.
G2 Filter	Filters the air before it enters the fan and ducting providing filtered air throughout the home.
Professionally Installed	Installed by HRV-trained installers and registered electricians to support quality workmanship and compliant electrical installation.
